EVIDENCE-BASED ADAPTIVE IMPLEMENTATION

Adaptive implementation is all about staying curious and continuing to refine your intervention as you implement. This approach ensures we stay true to our end goal: delivering interventions that resonate with our beneficiaries, and the health systems that will ultimately own and sustain them.

Questions? Contact ccole@psi.org

SHARE YOUR LEARNING
Adaptive implementation will generate rich programmatic evidence and insight.

REMEMBER
Sharing with our global community means that we can all advance AYSRH solutions that are responsive to and led by young people.

ASK!
How do we optimize our intervention as we scale?

What do we mean by ‘Optimize’?

Delights
To ensure solutions serve our target populations —how and where they need.

Cost-Efficient
Pursues decreased cost, increased volume, and high method adoption.

Quality
Complies with program and clinical services quality and ethical standards.

DON’T SILO
It can be tempting to divide and conquer, but focus on working as a collective team.

APPLY
Apply your adaptations in context-sensitive ways.

REMEMBER
Not all adaptations work in all places

AHA!
FOCUS your collaborative analysis to find useful adaptations for optimization.

COLLABORATE FOR ROUTINE ANALYSIS
Establish regular meetings to analyze and interpret your data together.

REMEMBER
Stay curious! Look for trends and learn from outliers.

PLAN & COLLECT INFORMATION
Use QUANTITATIVE and QUALITATIVE data to understand whether, how, and why your interventions are working, and in what contexts.

REMEMBER
Convene your team to decide:
  • What’s the data we need?
  • What methods will we use to collect it?
  • Who will collect it?
  • With what frequency?
